

Release Procedure

- Make sure that all the documents on Google Drive are release ready
- Export all the documents from Google Drive to PDFs
- Add these PDFs to GIT
- Test and make sure that this is a stable version, otherwise find the latest stable version.
- Run the application in Eclipse with the Android Emulator
- Take the generated .apk file in bin and overwrite the .apk in the GIT-directory
- Look at the old release notes and create a new one with the new functionality
- Commit all the checklist-changes and create a GIT TAG for the commit
- Push the commit
- Push the TAG
